

# Polymyositis in Vizsla

Muscle wastage, weakness, difficulty eating / drinking, drooling

## Instructions for DNA collection

## Form 1

Thank you very much for agreeing to participate in this project aiming to collect DNA from Hungarian Vizslas and their affected/unaffected relatives.

Only blood left over from diagnostic tests may be used for DNA extraction.

### DNA collection

- Remaining blood from a diagnostic test, such as a serum creatine kinase is put in an EDTA tube and sent to the UK DNA Archive.
- Owner should read and understand the UK DNA Archive for Companion Animals Information sheet or Leaflet provided.
- Sign the DNA Archive Consent Form (Form 2) for each dog sampled.
- Complete the Phenotype Form (Form 3) for each dog sampled. It is vital that we have the dog's correct pedigree name and registration number if available.
- Please also include a copy of the dog's pedigree.

Send Forms 2 and 3 with blood sample to

CIGMR  
Medical School Stopford Building  
The University of Manchester  
Oxford Road  
Manchester  
M13 1BJ

Please post or fax a duplicate of phenotype Form 3 together with a copy of the pedigree to  
Clare Rusbridge, Stone Lion Veterinary Centre, 41 High Street, Wimbledon, SW19 5AU.

Confidential Fax line 44 (0) 208 786 0525

Thank you again for your time and effort.
